INFORMATIVE FRAMEWORK PRICE LIST FOR STONE CUTTING SERVICES

NOTES: o prices are informative and are in EUR, value added tax is not included in the prices,

- a standard that does not allow the laying of stone on contact ((without joints), in the case of underfloor heating), if the customer insists on laying on contact and has trimmed STONE panels, there is no guarantee for such an implementation, a greater number of dilatation joints is recommended, min. 2-4 mm wide, so that the coating can "work", the surcharge for the contact is 30%,

- the prices only take into account work without materials, scaffolding is not included in the prices, o prices include the execution of work in "normal working conditions" and in unequipped premises,

- the prices do not include vertical transport up to the height: ground floor + two floors;

horizontal transports up to 30m,

- in the case of more demanding working conditions, the price is increased according to the actual situation,

- supervision work is charged at EUR 55.00/hour for an assistant worker

- supervised works are charged at EUR 85.00/hour for a stonemason

The price list is informative.

To calculate concrete prices, the contractor must take into account his own business costs and, based on them and taking into account the recommended norms, determine his own prices for the provision of individual services, which are covered in the presented informative example of the price list for stonework works.

Everything that is not covered in the price list is prepared separately.

Rimske Toplice, 22/02/2023
